Letter of Recommendation for Mustafa Jabir Poonawala

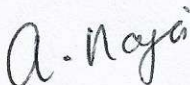

CreativeV Studios is a boutique software development company specializing in delivering mobile applications and backend for clients across the globe. We specialize in ideating, designing and iterating ideas in a cost effective manner enabling businesses to find a product-market fit. An intern at CreativeV gets an opportunity to work on real-world business problems and their technological solutions using the latest technologies with experienced and experts professionals in their fields.

Mustafa Jabir Poonawala interned with the company from 3rd Dec 2018 - 2nd Jan 2019 at our office in Bangalore, India. As a software developer intern, Mustafa demonstrated keen interest in technology and software development practices, as well as excelled in communication and presentation skills. During the internship, he worked on the following tasks -

1. Assisted Senior Software Engineer on various initiatives, including developing the checkout module, improving quality of the code.
2. Worked in migrating the application to a more Object Oriented approach using the new features of Java 8 (streams).
3. Worked on optimizing the performance by using efficient Multi-Threading libraries and new features of Java Platform.
4. Presented his learnings at the end of the internship in a company-wide meeting.

I would highly recommend him to work for any organisation in the Information Technology industry. His commitment and dedication to his work are impressive. He not only was able to deliver in his individual capacity but also demonstrated early leadership qualities by motivating others to do the same. Please feel free to contact me if you have any questions regarding his internship at CreativeV.

Sincerely,

Mr Amiruddin Nagri
